Architecture

Situated in one of Calgary's fastest-growing areas, this master-planned, regional urban centre features a pedestrian-friendly network of outdoor streets and plazas. Deerfoot City includes a diverse array of shops and restaurants in a unique streetscape setting. Designed to create natural social zones and infused with vibrancy, the project offers a totally unique shopping experience in northeast Calgary. The design creates a new social experience enjoyable in all weather with outdoor streets and plazas interspersed between indoor comforts. The new space is an outdoor network of streets, shops and restaurants situated around a pond.
