The Arthur Meighan Building Rehabilitation (AMBR) project presented a significant challenge: preserving as much as possible from two 1950s era office buildings while improving their function and performance. AMBR is a pilot project in the Canada Green Building Council's zero carbon initiative, and will be the federal government's flagship for sustainable building. The new design will reduce greenhouse gas emissions by over 80%, and put occupant health and wellbeing first. The project combines two buildings into one, with a new façade and a visual separation that runs diagonally across the building. This is manifested as an unbroken open staircase that allows active circulation within the space while permitting an abundance of light to filter towards the back of the deep floorplate.

## Meet The Team
