The new Calgary Cancer Centre will centralize treatment and care for cancer patients in southern Alberta. Symbolizing the type of care a patient can expect to receive, the design features two curving L-shaped forms that come together in an embrace surrounding an all-season garden as the “heart,” providing year-round access and views to nature for patients and their families. DIALOG, in collaboration with Stantec, is responsible for the architectural and interior design as well as structural, mechanical and electrical engineering. DIALOG is also providing landscape architecture, planning and urban design.
