Dialog MacKimmie Tower High Res 003 highresrgb

University of Calgary – MacKimmie Complex

The heart of the campus

Location

- Calgary, AB

Client

- University of Calgary

Anticipated Completion

2022

Size

- 35,425 sq m
- 381,311 sq ft

Sustainability

- CaGBC Zero Carbon Design Certification
- Targeting LEED® Platinum certification

Collaborators

- Entuitive
- SMP Engineering
- Transsolar Energietechnik
- Urban Systems

DIALOG Services

- Architecture
- Interior Design
- Landscape Architecture
- Mechanical Engineering

Designed to be a high-performance net-zero carbon building, the MacKimmie Complex comprises a fully renovated tower and block and a brand-new link that connects the two buildings by an atrium, surrounded by a redesigned outdoor gathering space. Designed with high performance features, the project has achieved a CaGBC Zero Carbon Design Certification in 2020. The multi-year, multi-phase project will enhance pedagogical and administrative environments, accommodate growth, and strengthen the sense of place and community in the heart of the University of Calgary's main campus. The building enhances modern-day learning in a way that goes beyond technology and programming. The building skin makes its energy-modelling systems tactile, or visible to the eye, as a way to make climate change conversations a permanent fixture in life on campus.
